

Part 2 - Manual Testing Report

Tester: Andrejs Macipura

Date: 17.09.2026

1. Environment

Browser: Google chrome

Browser version: Version 152.0.7977.84 (Official Build) (64-bit)

Operating system: Windows 11

Environment: <https://stage.longo.lv>

Viewport: 390 × 844 CSS pixels

Testing method: Chrome DevTools mobile emulation

Exact URLs tested:

Finance calculator: <https://stage.longo.lv/automasinu-finansejums>

Car catalog/search: <https://stage.longo.lv/en/catalog>

2. Exploratory Session

Charter: Explore the financing/monthly-payment calculator and car filtering on a mobile viewport.

Start: 12.41

End: 13.21

Total part 2 time: 60 minutes

Exploratory session: 40 minutes

Covered

Financing/monthly-payment calculator:

- Initial/default state and mobile layout for car loan
- Car price validation using 0 EUR, 10 000 EUR and 30 000 EUR for car loan
- Payment period using 0, 60 and 120 months for car loan
- Automatic recalculation after input changes for car loan
- Payment button press result
- Required field positive test

- A success message confirms that the financing application was received.
- Required field negative test
- Initial/default state and mobile layout for car leasing
- Car price validation using 0 EUR, 12 000 EUR and 30 000 EUR for car leasing
- Initial payment for car leasing at 0 EUR, 5700 EUR and at 35 000 EUR
- Repayment term at 0, 42 and at 120 months

Car filtering:

- Initial filter state and mobile layout.
- URL updates after changing filters.
- Selected filter chips, individual removal, and corresponding URL updates.
- "Select from ... cars" count updates after filter changes.
- Applying filters opens the corresponding results.
- Clearing filters resets selections, chips, and results.
- Save-filter button behaviour: Asks to name filter and then asks to log in

Consciously not covered:

- Validation of each required form field individually.
- Every option within each filter section.
- All possible filter combinations.

Reason:

Prioritized broad coverage within the 40-minute timebox.

Findings

Test-data note: One financing application was submitted successfully during exploratory testing. The free-text fields were not prefixed with `QA TEST`, contrary to the staging test-data instruction. No further unprefixed submissions were made.

No defects were observed during the 40-minute exploratory session. Coverage included mobile financing inputs and recalculation, form submission with all required fields empty and completed, and one option/value from each filter section. Individual field validation and all filter combinations were not covered, so this result does not establish that the features are defect-free.

3. Bug Reports

No reproducible defects or inconsistencies were found during Part 1 or Part 2.

Areas specifically checked included:

- Mobile layout and usability of the financing calculator
- Loan and leasing input validation
- Monthly-payment recalculation
- Required-field behaviour
- Successful form submission
- Catalog filter selection and removal
- Filter-result count changes
- URL parameter changes
- Clearing filters
- Save-filter behaviour

4. Test Cases

Selected feature: Financing / monthly payment calculator - car loan

TC-01 - Calculate monthly payment with valid car price and term

Type: Positive

Preconditions: Finance calculator page is open on a mobile viewport. Car loan option is selected.

Test data: Car price: 10,000 EUR; repayment term: 60 months

Steps:

1. Open the financing calculator.
2. Car loan option is selected by default
3. Enter 10,000 EUR as the car price.
4. Set the repayment term to 60 months.
5. Observe the calculated monthly payment.

Expected result:

The entered values are accepted and the monthly payment is recalculated and displayed without a validation error.

TC-02 - Submit financing application with valid required data

Type: Positive

Preconditions: Finance calculator page is open and a valid monthly payment has been calculated.

Test data: Valid values in all mandatory fields.

Steps:

1. Enter valid values.
2. Fill in all mandatory application fields with valid test data.
3. Go through all steps and submit the financing application.

Expected result: The application is accepted and a success message is displayed confirming that the financing application was received.

TC-03 - Attempt calculation with car price of 0 EUR

Type: Negative

Preconditions: Finance calculator page is open and car loan is selected.

Test data: Car price: 0 EUR

Steps:

1. Open the car loan calculator.
2. Enter 0 EUR as the car price.
3. Press enter and attempt to continue with the calculation.

Expected result: The calculator does not accept 0 EUR as a valid car price and safely handles the invalid value by restoring the default car price.

Actual result: The car price automatically returned to the default value after 0 EUR was entered.

Result: Pass

TC-04 - Submit application with required fields empty

Type: Negative

Preconditions: Finance calculator page is open.

Test data: Required application fields left empty.

Steps:

1. Enter valid financing values so that a monthly payment is available.
2. Leave the required application fields empty.
3. Press the submission button.

Expected result: The form is not submitted. Required fields are clearly identified with validation feedback and error message is shown

TC-05 - Calculate financing at maximum repayment term

Type: Boundary

Preconditions: Finance calculator page is open and car loan is selected.

Test data: Repayment term: 84 months, which is the maximum repayment term available in the calculator.

Steps:

1. Enter a valid car price.
2. Set the repayment term to 84 months.
3. Observe the calculated monthly payment

.

Expected result: The calculator accepts 84 months as a valid boundary value and displays a recalculated monthly payment without a returning to default
